# Overview

---

The JSS Report Downloader lets you download saved searches from the JAMF Software Server (JSS). Using the JSS Report Downloader, users can view all reports available in the JSS and download reports to a specified location on a set schedule.

## Requirements

The JSS Report Downloader uses **launchd** to schedule downloads. It is only supported on the following versions of Mac OS X:

- 10.4.x
- 10.5.x

## Concepts

Before using this tool, make sure you are familiar with the following functions in the Casper Suite: saving advanced searches and setting privileges on JSS user accounts.

### Saved Searches

If there are no searches saved in the JSS, then no reports are displayed in the JSS Report Downloader. For more information on searching the JSS, please see the “Advanced Search” sections in the *Casper Suite Administrator’s Guide*.

### JSS User Account Privileges

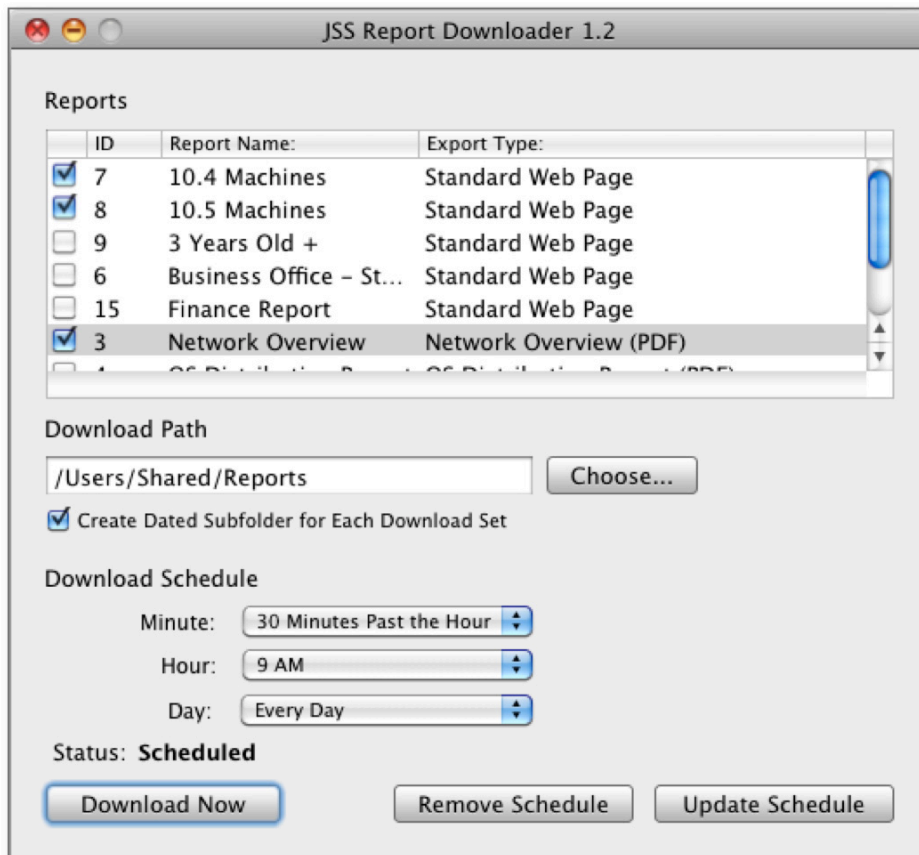

To use the JSS Report Downloader, users must have a user account in the JSS with one or both of the following privileges specified:

- View Inventory Tab
- View Saved Searches

# Scheduling Report Downloads

## To schedule report downloads:

- 1 Select the reports that you want to include in the download schedule.
- 2 Click the **Choose** button and select the location to which reports will be downloaded.  
By default, all reports are downloaded to this location and are labeled with the timestamp and date.  
To create a separate directory for each set, select the **Create Dated Subfolder for Each Download Set** checkbox.
- 3 Use the **Minute**, **Hour**, and **Day** pop-up menus to specify a download schedule.
- 4 Click the **Update Schedule** button to create the download schedule.
- 5 To obtain a copy of reports immediately, click the **Download Now** button.  
Reports are downloaded to the location specified in step 2 in a new directory titled with the timestamp and date.

- 6 To remove a download schedule click the **Remove Schedule** button.

## Release History

---

Version	Changes
v1.01	■ Added compatibility for Casper Suite v7.0.
v1.2	■ Added support for Casper Suite v7.3. ■ Added <b>Create Dated Subfolder for Each Download Set</b> function.
