Overview

The JSS Enrollment Profile Creator (JSSEPC) allows you to mass create, download, and delete enrollment profiles based on the contents of a CSV (Comma Separated Values) file. This can greatly reduce the time you spend preparing enrollment profiles for installation through Apple's iPhone Configuration Utility (iPCU).

Requirements

To use the JSSEPC, you need:

- A computer running Mac OS X v10.5 or later
- Casper Suite v8.0 or later
- Access to the JAMF Software Server (JSS)
- A JSS user account that has privileges to read, create, and delete enrollment profiles
- A CSV file that contains information for each enrollment profile.
Use the `importExample.csv` template in the Resource Kit to create this file.

Important Concepts

Before using the JSSEPC, you should be familiar with the following concepts in this section.

Installing Enrollment Profiles Using iPCU

The JSSEPC facilitates this method of enrollment only. After mass creating enrollment profiles and downloading them from the JSS, you must upload the enrollment profiles to iPCU and install them on devices to complete the enrollment process. When you are done, you can use the JSSEPC to mass delete the enrollment profiles from the JSS. For instructions on installing enrollment profiles through iPCU, see the "Installing Enrollment Profiles Using iPCU" section of the *Casper Suite Administrator's Guide*.

Managing JSS User Accounts

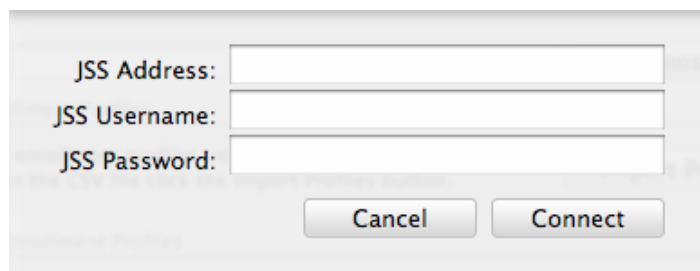

To use the JSSEPC, you must have a JSS user account with privileges to read, write, and delete enrollment profiles. For more information on assigning account information, see the "Managing JSS User Account" section in the *Casper Suite Administrator's Guide*.

Using the JSS Enrollment Profile Creator

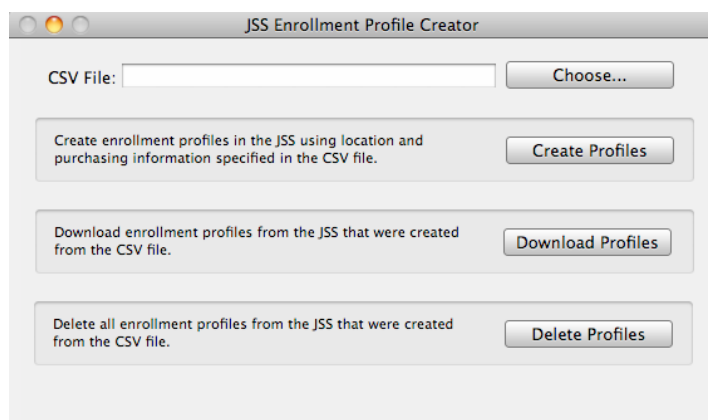

Use the following instructions to mass create, download, and delete enrollment profiles in the JSS.

To mass create, download, and delete enrollment profiles:

1. Open the JSSEPC.
2. Enter the server's DNS name or IP address and specify credentials for a JSS user account that has Mobile Device Enrollment Profile privileges. Then, click **Connect**.

A screenshot of a small dialog box titled "JSSEPC". It contains three text input fields labeled "JSS Address:", "JSS Username:", and "JSS Password:". Below the fields are two buttons: "Cancel" and "Connect".

3. Click the **Choose** button, and upload the CSV file that contains information for the enrollment profiles.

A screenshot of the "JSS Enrollment Profile Creator" application window. At the top, there is a "CSV File:" label followed by a text box and a "Choose..." button. Below this, there are three sections, each with a description and a button: 1. "Create enrollment profiles in the JSS using location and purchasing information specified in the CSV file." with a "Create Profiles" button. 2. "Download enrollment profiles from the JSS that were created from the CSV file." with a "Download Profiles" button. 3. "Delete all enrollment profiles from the JSS that were created from the CSV file." with a "Delete Profiles" button.

4. Click the **Create Profiles** button to create the enrollment profiles in the JSS.
5. Click the **Download Profiles** button to download enrollment profiles and save them to a desired location.
6. Click the **Delete Profiles** button to delete the enrollment profiles from the JSS.
7. Upload the enrollment profiles to iPCU and install them on mobile devices as explained in the "Installing Profiles Using iPCU" section of the *Casper Suite Administrator's Guide*.
